Energy Advantage™

In

Insulation is installed both in your roof and external walls of your home allowing your heating and cooling systems to work more efficiently.

HO

This easy to use home operations manual describes strategies to lower your energy and water costs - and lessen your impact on the environment.

WT

Your new home has a motorised water storage tank used as a water savings measure for your toilet and garden.

Wn

Special improved aluminum designed windows and architectural positioned in your home, helps keep heat inside during winter and outside during summer.

TH

The programmable thermostat helps you control costs by regulating your home's temperature around your family's schedule

AP

Selected Australian & European appliances utilise advanced technologies that use 10% - 50% less energy than standard models.

HA

Your heating, ventilation and A/C system delivers outstanding energy efficiency compared to typical "builder grade" systems.

5 Star Energy Rated Home

Ryland **Homes**

Our Environmental Initiative

In 2007, Ryland Homes launched Energy Advantage™ strategic environmental initiative to focus on the challenge of becoming a leading environmentally friendly company and to create a companywide culture of sustainability. This initiative builds on our longstanding commitment to the environment and sustainability.

We believe that the homebuilding industry has an opportunity to effect meaningful change regarding the impact of new home construction on the environment and that it is the responsibility of every homebuilder to begin that process. The goal of Energy Advantage is to look for opportunities to create systemic change throughout our organisation, building on the successes and learnings we have had with sustainable efforts and pilot programs with many of our partners.
